

PABLO RIVAS

215-272-9326 | pablo.rivas@temple.edu | linkedin.com/in/pablorivas1 | github.com/PRivas1 | Philadelphia, PA 19122

EDUCATION

Temple University
Bachelor of Science in Computer Science

Expected Spring of 2027
Philadelphia, PA

TECHNICAL SKILLS

Languages: Java, C, Python, JavaScript, HTML/CSS, Bash

Tools/Platforms: React, Node.js, Git, Linux, AWS Cloud, Azure: Functions - Static Web Apps - Cosmos DB

Certifications: AWS Certified Cloud Practitioner (CLF-02)

PROJECTS

URL Shortener: Full-Stack Serverless Application

React, Node.js, Azure Functions, Azure Static Web Apps, Cosmos DB

November 2025
[\[Live Demo\]](#) [\[GitHub Repository\]](#)

- Deployed a full-stack, responsive React application using Azure Static Web Apps, which integrated a CI/CD pipeline for automated builds.
- Delivered low-latency URL redirection and creation by architecting a serverless Node.js backend with Azure Functions and RESTful API endpoints.
- Achieved sub-10ms point-read latency for URL lookups by leveraging an efficient key-value schema in Azure Cosmos DB (NoSQL).

Weather Forecast App: API-Driven Web Application

HTML, CSS, JavaScript, REST APIs

June 2025
[\[Live Demo\]](#) [\[GitHub Repository\]](#)

- Enabled users to retrieve 7-day forecasts from the user input (city/state) by architecting an asynchronous 2-step JavaScript data pipeline.
- Chained the OpenStreetMap (geocoding) and NOAA (weather) APIs, dynamically parsing complex JSON responses with vanilla JavaScript to render a responsive HTML/CSS forecast display.

Personal Server: Debian 12 SSH Environment

Debian 12, Bash Scripting, Tmux, SSH, DNS Configuration

February 2025
[\[GitHub Repository\]](#)

- Configured and managed a self-hosted, headless Debian 12 server environment for game hosting and software testing, implementing Dynamic DNS for custom domain SSH access.
- Automated server session deployment by developing a Bash script that reduces 5 minutes of manual typing to a single command, launching a formatted Tmux session with hardware monitoring and the game server console.
- Reduced log analysis time from 30+ minutes to seconds by writing a script that automatically parses, filters, and aggregates log files to isolate specific events (player joins/leaves) into a clean summary file.

WORK EXPERIENCE

Giant Food Stores (Starbucks): Barista

Philadelphia, PA: Oct 2024 - May 2025
Collaborated with a team to ensure precise and efficient order fulfillment in a high-volume queue.

Student Painters: Painter

Jamison, PA: May 2023 - Aug 2023
Managed project tasks as part of a team, successfully adhering to strict client schedules and deadlines.

Open Door Valet: Valet Attendant

Ewing, NJ: Mar 2022 - May 2023
Assisted clients with a digital ticketing system and managed vehicle logistics with 100% accuracy.

Wawa: Customer Service Associate

Horsham, PA: July 2021 - Mar 2022
Provided direct customer support and issue resolution in a fast-paced, high-traffic environment.
